Review the IEEE Code of Ethics - https://www.ieee.org/about/corporate/governance/p7-8.html . When answering the following questions, refer to the 10 items in the Code of Ethics and directly reference any that are applicable. Write your answers in a separate word document or text file and upload it here.

Q1: You are working for a large software company and you have a very important deadline tomorrow. It is late at night, but you find some code online (publicly and freely accessible) that will help with your project. You e-mail the author of that code to ask for permission to use it, but you don't receive a response in time.

- Identify and explain in detail what the ethical issue is presented in the scenario.

- Explain in detail the potential results or outcomes for you, the IT professional, and for the person in question if the ethical issues are not addressed?

- What are the correct options or solutions that you should address or provide to properly rectify the scenario?

Q2: A classmate finds a web site with all the assignment solutions for your computer programming class and shares it with you. It is public and freely accessible resource where anyone can submit code. While you are doing well in your programming class, you refer to it from time to time to check your work. You don't share this resource with anyone else, and you don't copy and paste code from it. Is this OK? Why or why not?

- Identify and explain in detail what the ethical issue is presented.

- Explain in detail the potential results or outcomes for you, the IT professional, and for the person in question if the ethical issues are not addressed?

- What are the correct options or solutions that you should address or provide to properly rectify the scenario?

Q3: From the IEEE Code of Ethics, choose three values and provide a corresponding hypothetical situations where a programmer might be tempted to break that value in an academic or professional setting.
